STANLY FERNÁNDEZ

Data Analyst | Business Intelligence | Data Engineering (Databricks)

Santiago de los Caballeros, Dominican Republic | sffernandez06@gmail.com | linkedin.com/in/stanly-fernandez-data | github.com/Stanly06 | stanly06.github.io

PROFESSIONAL SUMMARY

Data Analyst and Industrial Engineer with 7+ years of experience in manufacturing operations, turning production and quality data into KPIs, reports and dashboards that support management decisions. Skilled in Power BI (DAX, Power Query), SQL and Python, with hands-on data engineering experience building automated, incremental pipelines in Databricks with PySpark, Auto Loader, Delta Lake and the Medallion Architecture. Google Data Analytics and Google Business Intelligence certified, with an MBA and a Master's in Big Data & Business Intelligence.

TECHNICAL SKILLS

- **Business Intelligence:** Power BI, DAX, Power Query, Data Modeling, KPI Design, Dashboard Development, Data Visualization, Advanced Excel
- **Data Engineering:** Databricks, PySpark, Spark SQL, Delta Lake (MERGE), Auto Loader, Medallion Architecture (Bronze, Silver, Gold), Unity Catalog, ETL Pipelines, Lakeflow Jobs (Databricks Jobs), REST API Ingestion, Data Profiling, Data Quality Validation
- **SQL & Programming:** SQL (PostgreSQL), JOINs, CTEs, Window Functions, Subqueries, Python (pandas, NumPy, Matplotlib), JavaScript (Chart.js), Git, GitHub
- **Cloud:** Azure Databricks, Azure Data Lake, Microsoft Fabric (in training)
- **Operations & Quality:** Six Sigma, Kaizen, 5S, Quality Control (DPU, CPK), Root Cause Analysis, Production Planning, SAP
- **Languages:** Spanish (Native), English (Professional Working Proficiency)

PROFESSIONAL EXPERIENCE

Quality Control & Production Assistant | CdF Domitab SA

Santiago de los Caballeros, Dominican Republic | Feb 2023 – Present

- Designed and deployed Power BI dashboards using DAX measures and Power Query transformations, cutting manual reporting time by 30% and giving production and finance teams real-time visibility into KPIs.
- Built SQL-based data pipelines consolidating attendance, efficiency and quality records across departments, reducing report preparation time from several hours to under 15 minutes per cycle.
- Conducted end-to-end data analysis, including data cleaning, data modeling and aggregation, to identify production bottlenecks, enabling process adjustments that improved throughput by approximately 15%.
- Collaborated with IT to automate data collection workflows across 4 production modules, replacing error-prone manual inputs and improving data reliability by 20%.
- Created daily production reports by area and module for the production manager and monitored attendance, production effectiveness and efficiency indicators.
- Conducted quality audits on tobacco varieties to evaluate quality and yields, and delivered reports and audit findings to management, finance and senior stakeholders.
- Prepared and analyzed quality samples for external clients and monitored classification and packaging processes against quality standards.

Production Team Leader | La Aurora Cigars

Santiago de los Caballeros, Dominican Republic | Nov 2021 – Feb 2023

- Analyzed production scheduling data to optimize line balancing, identifying supply gaps 48 hours in advance and reducing material shortages by approximately 25%.
- Led and coordinated teams in the primary process area (classification, fermentation, stemming and selection), managing the weekly production schedule and material supply to the cigar-making area.
- Applied Six Sigma, Kaizen and 5S, supported by data analysis, to standardize quality checkpoints and reduce process waste.
- Tracked and reported weekly production KPIs to operations management, enabling data-driven staffing and throughput decisions that improved weekly output targets by 10–15%.

Quality Auditor | La Aurora Cigars

Guazumal, Tamboril, Dominican Republic | May 2018 – Nov 2021

- Collected and analyzed quality samples across production stages, calculating DPU and CPK metrics to monitor process performance and detect early defect trends.
- Developed structured quality reports with Six Sigma tools, identifying root causes of recurring defects and contributing to process improvements that reduced defect rates by over 18%.
- Maintained quality databases and enforced data integrity across inspection records, enabling consistent trend analysis and audit readiness.

PROJECTS

RD Economic & Financial Intelligence Platform | Databricks, PySpark, Auto Loader, Delta Lake, Unity Catalog, Lakeflow Jobs, Power BI | 2026

Live platform: stanly06.github.io/rd-intelligence

- Built an end-to-end Databricks lakehouse that integrates 6 official Dominican sources (Central Bank exchange rate since 1991, CPI and family basket, MICM fuel prices, Pro Consumidor, MEM electricity and Ministry of Agriculture market prices) into Bronze, Silver and Gold Delta tables.
- Automated file acquisition from the national open-data portal API (datos.gob.do) and institutional sites into an append-only archive, with incremental, exactly-once ingestion using Auto Loader and SHA-256 file lineage.
- Enforced data-quality rules with rejected-record logging and reconciliation checks; Gold KPIs match officially published values (e.g., 5,550 of 5,550 monthly CPI changes).
- Orchestrated 26 tasks in 6 parallel chains with a weekly Lakeflow Job and published the results in a bilingual (ES/EN) web platform and a Power BI report.

MLB Daily Games ETL Pipeline | Databricks, PySpark, Delta Lake, SQL, REST API | 2026

github.com/Stanly06/MLB-Daily-Games-ETL-Pipeline

- Built an automated ETL pipeline that ingests daily game data from the MLB Stats API into Bronze (raw JSON), Silver (typed games table) and Gold (daily KPI summary) Delta tables.
- Implemented idempotent Delta Lake MERGE upserts and a pipeline log table that records status, rows processed and duration for each layer.
- Orchestrated four dependent notebooks as a Databricks Job scheduled nightly, with SQL validation queries for each layer.

SQL Analytics: Music Store and Netflix Catalog | PostgreSQL

github.com/Stanly06

- Answered 11 business questions on an 11-table music store database using JOINs, subqueries, CTEs, ROW_NUMBER() and recursive CTEs.
- Answered 15 business questions on 8,800+ Netflix titles using CTEs, RANK() and string functions (STRING_TO_ARRAY, UNNEST, SPLIT_PART).

Power BI Dashboards: Video Game Sales and Infant Mortality | Power BI, DAX, Power Query

github.com/Stanly06

- Built interactive reports with KPI cards, stacked charts, maps, scatter plots and slicers, using Power Query segmentation and DAX measures to compare regions, platforms and countries.

EDUCATION

- MBA + Master's in Big Data & Business Intelligence | ENEB, European Business School of Barcelona (Universidad Isabel I) | Jun 2023 – Jun 2026
- B.S. Industrial Engineering | Universidad Autónoma de Santo Domingo (UASD) | 2014 – 2021

CERTIFICATIONS

- Google Business Intelligence Professional Certificate – Google / Coursera
- Google Data Analytics Professional Certificate – Google / Coursera
- Data Science with Python
- Professional Course in Forecasting Methods: Calculations & Interpretation
- EF SET English Certificate (B1)
- In progress: Microsoft PL-300 Power BI Data Analyst; Databricks Certified Data Engineer Associate; Microsoft Fabric Data Engineering

KNOWLEDGE SHARING

Author of a Databricks Data Engineer Associate study guide, a 100-question Power BI interview guide and project walkthrough videos on YouTube (youtube.com/@stanlyfernandez2887).
